QualaTech Aero Consulting Ltd.

Safety Management System (SMS) philosophy is proven and well tried; SMS is not a fad and it is not going to go away. Furthermore, SMS is 'not a cost' when designed and implemented correctly within the organisation under which it must serve. A SMS is an effective and proven business mechanism that enhances and augments a Company's 'bottom line' - a Key Performance Indicator (KPI). However, when commitment is less than total - lacking belief and purpose, the effectiveness of a SMS is naturally compromised. Determining the effectiveness of a SMS is difficult to achieve '**objectively**' from within the organisation. A 3rd. Party proactive approach to a SMS Assessment will significantly help reduce error and loss, which includes: incidents, liability, injury, accidents, death and loss of profit.

SMS Assessment Tool:

A SMS can only be Audited for Compliance, a SMS Assessment however, determines its effectiveness and if it is working as intended. If there has been no recognisable improvement to the 'bottom line' then the chances are the SMS is not effective!

The SMS Assessment (SMSA) process is a proactive assurance and measurement methodology, based on a series of defined indicators which are designed to determine the effectiveness and health of a SMS. The SMSA is not a Gap Analysis or an Audit; the process comprises of a series of formal interviews, interactive discussions and verification processes with a selection of employees and key personnel. The Assessment process recognises the difference in oversight methodologies from traditional '**compliance-based**' requirements to '**performance-based**' systems. This comparative process verifies and validates applicable compliance requirements while ascertaining the effectiveness of the SMS Programme. In other words the SMSA identifies the 'expectations' of an organisation's SMS (including industry best practices) in terms of meeting a Standard under prescriptive regulation (as applicable), while assessing the program performance to effectively manage Safety Risk.

The Assessment process draws its strength from having been developed to harmonise with the global SMS framework (ICAO Annex 19 and SMS Manual 9859) in conjunction with the FAA's framework and requirements for SMS. Via this process, a nationally recognised Standard is maintained allowing Organisations to obtain acceptable and/or improved standards of effectiveness.

The SMS Assessment process comprises of three primary stages:

Stage One. Encompasses a 'desk-top' review of applicable SMS documentation. The process focuses on assessing whether the 'indicators for 'compliance' and 'performance' are present and suitable.

Stage Two. An on-site assessment is conducted to determine whether all principal 'indicators' are present and operating and if the overall effectiveness of the SMS is being achieved system wide. On-site activities are accomplished by two highly experienced and competent Assessors; their interaction and acceptance (at all levels of operation) is essential in determining the overall effectiveness of each SMS component.

Stage Three. Correlates the accomplished SMSA results, detailing the data and providing a formative conclusion in qualitative and quantitative terms as appropriate. The completion of the SMS Assessment Report and recommendation(s) is the final deliverable product.

The SMSA is compatible with all organisational structures and complexity. It is performed without compromise or bias and is totally complementary to both large and small enterprises. The evaluation tool identifies whether key and fundamental SMS Elements are present, suitable and functional, while determining how well the SMS programme is operating to a prescribed Standard (internal or external). Furthermore, the process measures recognised 'Best Practice' as a means but not the only means, of moving 'Beyond Minimum Compliance' (BMC) as an Organisation strives for 'continuous improvement' and 'safety excellence'.

Under a 3rd. Party SMSA, an Organisation will be able to objectively evaluate, compare and verify its SMS - inclusive of KPIs as a means of establishing the overall effectiveness of the programme. The process also takes into consideration 'internal' and 'external' applications: i.e. management of 'Safety Performance' as well as the assurance and management of 'Safety Promotion'. Both high priority and essential features that Clients demand of a proactive and safe operation/organisation.

QualaTech has implemented many aviation style SMS effectively, on time and to budget. We thoroughly understand the aviation business and appreciate that your business "is unique". It is this uniqueness or 'personality' that determines your SMS requirements and methods of operation. Equally important, QualaTech recognises what your Client and Customer needs are, along with their concerns and challenges - ultimately affecting your SMS and Customer Service.

Irrespective of mandatory compliance governing SMS, without a robust and functional SMS in coordination with a Quality Management System (QMS), an organisation's ability to acquire additional business, reduce loss and error and diminish unnecessary liability is substantially curtailed. An impartial proactive 3rd. Party SMS Assessment is the recognised and proven method to appraise and test a SMS. The exercise not only improves the overall Safety Management capability but to assure Clients and Customers (internal & external) that the SMS is both functional and effective.
